

AO30

Some options are not present at the time of writing, so bear in mind these will need to be added.

Any layers not mentioned should remain as-is.

Arrow-layers:

“arrow_width” and “arrow_height” should be coloured black as standard, and light up yellow when the corresponding measurement input box is selected.

Instruction for individual layers:

“ao_frame_bottom”, “ao_frame_middle” and “ao_frame_top”: Always visible. Infill colour should follow “Konstruksjonsfarge”

“plisse_bottom_string”, “plisse_top_string”, “ao_cord_string”, infill colour should equal:

- “Konstruksjonsfarge” if “Velg farge på snor” -> “Lik farge som konstruksjonsfarge” is selected, or
- “Fabric color” if “Velg farge på snor” -> “Lik farge som tekstil” is selected

NB: This option could be problematic considering top and bottom fabric can have different colours.

Solution: Remove option, or allow to select which fabric the colour should match.

“ao_cord_parts”: Always visible. Infill colour should equal “Konstruksjonsfarge”.

“plisse_bottom” and “ao30_plisse_bottom_overlay”: Visible when a plisse-fabric is selected for the bottom half. Hidden when duette-fabric is selected for this half. Infill colour should match selected fabric colour.

For all layers with “duette_bottom” in name: Visible when a duette-fabric is selected for the bottom half. Hidden when plisse-fabric is selected for this half.

- “ao30_duette_bottom_overlay” hides/shows as described above.

Additional functions for other layers:

- “duette_bottom”: Always visible. Infill is “Fabric colour bottom”:
- “duette_bottom_back”: Always visible. Infill is white for any Duotone or BO fabric is selected, but same as “Fabric colour bottom” when a fulltone tekstil is selected.
- “duette_bottom_bo”: Visible when a BO/Blackout fabric is selected for bottom. If else it should be hidden.
- “duette_bottom_not_bo”, should be visible for non-bo fabrics (any duette fabric that has some play from sun shining through). For BO fabrics, this should be hidden.

“plisse_top” and “ao30_plisse_top_overlay”: Visible when a plisse-fabric is selected for the top half. Hidden when duette-fabric is selected for this half. Infill colour should match selected fabric colour.

For all layers with “duette_top” in name: Visible when a duette-fabric is selected for the top half. Hidden when plisse-fabric is selected for this half.

- “ao30_duette_top_overlay” hides/shows as described above.

Additional functions for other layers:

- “duette_top”: Always visible. Infill is “*Fabric colour top*”:
- “duette_top_back”: Always visible. Infill is white for any Duotone or BO fabric is selected, but same as “*Fabric colour top*” when a fulltone tekstil is selected.
- “duette_top_bo”: Visible when a BO/Blackout fabric is selected for top. If else it should be hidden.
- “duette_top_not_bo”, should be visible for non-bo fabrics (any duette fabric that has some play from sun shining through). For BO fabrics, this should be hidden.
